USDA Certification for Supercoat-316L

This is to certify that Supercoat-316L, product number 14-0316, meets the current requirements of the Food Safety and Inspection Service of USDA for use in Federally Inspected Meat and Poultry Plants.

Supercoat-316L is a formula of BIC Corporation-Ridgefield, dba Burke Industrial Coatings at the address on this letterhead. When used in conjunction with the recommended primer and applied according to label and product data directions, Supercoat-316L is suitable for use on food processing and packaging equipment and will not result in the adulteration of food products. Supercoat-316L will perform well under a daily regimen of rigorous cleaning, temperature change and wet conditions, is impervious to moisture and is a metallic grey color that will not obscure detection of debris or unsanitary conditions. Supercoat-316L contains no known carcinogens, mutagens or teratogens classified as hazardous substances, heavy metals or other toxic substances and is not considered a pesticide, nor does it have pesticidal characteristics.

Should FSIS ever require the complete chemical composition for Supercoat-316L, it will be submitted upon their written request for that information.
